TYPE (positive, negative, wall) <i>Positive</i>	DEFINITION (cut in floor of X, fill of pit Y, north wall of room Z, etc.) <i>Muddy layer between and underneath slabs in SE Part of Room 38</i>		
DESCRIPTION (include consistency, color, composition, inclusions, dimensions; for cuts, also include shape and orientation) <i>Layer of brown mud/soil between and underneath the stone and tile slabs around cut 874 in the bottom of the S part of the room. The brown soil is packed around the stones, but also underneath the clay (geological) layer in the cut. This layer produced only a very little bit of ceramic and bone, though much of it was taken for paleobotanical examination.</i>

INTERPRETATION <i>This layer appears to be a first attempt to fill cut 874 at the bottom of cut 728. Cut 874 may have been some sort of drain and this soil, along with tiles, rocks and slabs, filled it up and covered it over. (Galina's entire wheel barrel full of mud produced only one small iron object, a little bit of metal and two tiny pieces of ceramic.)</i>
