

SITE CH	YEAR 2006	ROOM # or AREA NAME Room 38, Complex 2	CONTEXT NUMBER 0838
TYPE (positive, negative, wall) Positive	DEFINITION (cut in floor of X, fill of pit Y, north wall of room Z, etc.) Layer of compact soil in S corner of NW part of Room 38		
DESCRIPTION (include consistency, color, composition, inclusions, dimensions; for cuts, also include shape and orientation) Distinct layer of yellow clay-like material in the extreme SW corner of cut 900. This layer was characterized by slightly more compact, yellow soil that was isolated in this corner and distinct from neighboring contexts in both color and consistency.

FILLS <u>900</u>		FILLED BY	
ABUTS		ABUTTED BY	
EQUALS		BONDS WITH	
INTERPRETATION This layer must be some settlement of the filling layers of cut 900. Though the material is certainly different from the contexts around it, there does not seem to be any reason for this particular small patch to be different - no particular architectural or different feature.

STRATIGRAPHIC NOTES/DOUBTS (include any comments on methods, contamination, excavation conditions, or anything else that seems relevant) As with all of the layers that surrounded pit 601, there is some level of doubt about their integrity. This patch, of them all, was clearly different material and was not found in the opposite side of the pit.
