

SITE CH	YEAR 2006	ROOM # or AREA NAME Room 38, Complex 2	CONTEXT NUMBER 0781
TYPE (positive, negative, wall) Positive	DEFINITION (cut in floor of X, fill of pit Y, north wall of room Z, etc.) Brown loose soil in cut 901 and under wall 264, room 38		
DESCRIPTION (include consistency, color, composition, inclusions, dimensions; for cuts, also include shape and orientation) This very small ^{STAIN} layer filled only a very small (exposed) area of cut 901 in room 38. The soil was loose and soft and contained almost no material. It was distinguished from its neighboring 780 by the looseness of the soil, though the color and texture of the soils were quite similar.			
MUNSELL COLOR 10YR 4/3

STRATIGRAPHIC NOTES/DOUBTS (include any comments on methods, contamination, excavation conditions, or anything else that seems relevant) This layer, because it was revealed simultaneously with 780, is doubtful as its own layer. It filled the upper (90) adjacent cut and was not beneath any strata during the off season. Thus for it could well be seen as loose material that accumulated there during the back fill of the area.
