DESCRIPTION									
large patch situated in the central part of the courtyard. It has the form of a horseshoe - this layer is characterized by a black soil, a lot of iron slag, and marls and highly fragmented tiles. The layer contains many pottery and stones of small and medium size. The north-east limits are recognizable and appear bounded by stones.

PA 110,									
PA 79, PA 333,									

It is very difficult to have the sure limits for the nature of layer.

INTERPRETATION

The highly presence of ^{iron} slag and marks makes one think that the layer is connected with a place for iron working.
