

SITE <i>CH</i>	YEAR <i>2006</i>	ROOM # or AREA NAME <i>Complex 2, Room 38</i>	CONTEXT NUMBER <i>0606</i>
TYPE (positive, negative, wall) <i>Positive</i>	DEFINITION (cut in floor of X, fill of pit Y, north wall of room Z, etc.) <i>Compact clayish surface in NW part B Room 38</i>		
DESCRIPTION (include consistency, color, composition, inclusions, dimensions; for cuts, also include shape and orientation) <i>Layer of compact, clayish soil. This was fairly well compacted and was not terribly well delineated in the area opposite cut 601. The soil contained a lot of ceramic and stone, with just a few pieces of glass and metal. There was an abundance of sea stones and sea shells.</i>

INTERPRETATION <i>This appears to be a well-compacted layer of fill surrounding cut 601. The compactness might be a result of one walking on it, or the archaeologists last summer using it for their excavation of cut 601. There was a lot of debris in this layer, especially large ceramics, sea stones, and sea shells. Perhaps this layer of fill was taken from</i>			
MATERIAL DATABLE IN FIELD? (if yes, specify) <i>close to the seaside, rather than the construction debris we were finding in cut 728.</i>		PRELIMINARY DATE

STRATIGRAPHIC NOTES/DOUBTS (include any comments on methods, contamination, excavation conditions, or anything else that seems relevant) <i>The only doubts might spring from #560, charcoal the fact that this layer seemed artificially compacted (not a use surface) perhaps from our use of it in this year's work, and that in last year's work, so, this</i>
