STATE OF PRESERVATION <i>DISCREET</i>									
DESCRIPTION <i>Layer of sandy soil that we found at in western side of room 23. The stratigraphic unit descending from South to North. On the surface we found a lot of burnt animal bones and under those a lot of scales of fish, that maybe are remains of meal. We take 1/2 Kg of soil for sampling.</i>

	ABUTTED BY <input checked="" type="checkbox"/>			ABUTS <i>PA 21 - PA 22 - PA 244</i>					
	COVERED BY <i>PA 108</i>			COVERS <i>PA 143</i>			EARLIER THAN		
	CUT BY <i>PA 88</i>			CUTS <input checked="" type="checkbox"/>					
	FILLED WITH <input checked="" type="checkbox"/>			FILLS <input checked="" type="checkbox"/>					

Larissa Sedikova suggests to interpret this thinking of the modern channel that was above this layer, but the pottery that we have found seems to be of XIII cent.

INTERPRETATION

It could be a base of use of the room 23.
