

SITE <i>CH06SR</i>	YEAR <i>2006</i>	ROOM # or AREA NAME <i>Complex 2, Room 38</i>	CONTEXT NUMBER <i>790</i>
-----------------------	---------------------	--	------------------------------

TYPE (positive, negative, wall) <i>Positive</i>	DEFINITION (cut in floor of X, fill of pit Y, north wall of room Z, etc.) <i>Brown soil in semicircular cuts 729 and 907 in room 38</i>
--	--

DESCRIPTION (include consistency, color, composition, inclusions, dimensions; for cuts, also include shape and orientation)
Compact brown layer of soil spanning cuts 729 and 907. This layer was, though excavated separately, the last above the bedrock in these narrow cuts. Two large stones rested on top of this area (part of context 890) and caused 790 (and associated layers above it) to be slightly more compacted here.

INTERPRETATION
The fills of cuts 729 and 907 appear to be fills of the late Roman period (c. 3rd century) of earlier cuts, perhaps to build the first series of walls that (may be) are visible in Room 31, adjacent to wall 264, before the current walls were built.

STRATIGRAPHIC NOTES/DOUBTS (include any comments on methods, contamination, excavation conditions, or anything else that seems relevant)
There is doubt, of course, that the layer of material in the portion of the cut that was excavated in June and that done in July do not match exactly. However, I am reasonably certain that they are - and I am supported by
