Object: Terracotta head - Antefix?

Material: Terracotta

Square: near edge of excavated area, on way to back dirt
Level: out of context

Photograph:

Drawing:

Dimensions: L.,

H.,

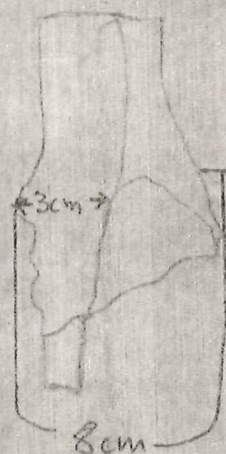

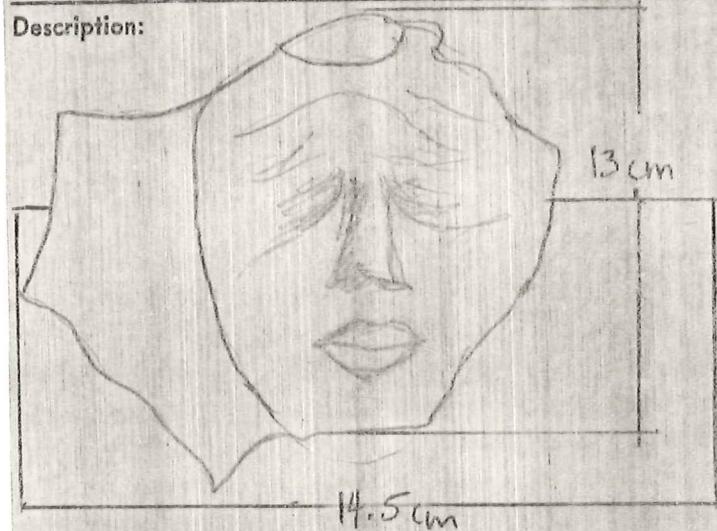

W.,

Th.,

Technique:

Condition: chipped and eroded (good).

Description:

This head (possibly belonging to an antefix) was found exposed near the excavation. On its right, its terracotta mounting remains. The head has been chipped at the chin and at its left side. It seems to have a very elaborate hair which is capped off on top by a bun.

It appears to be munsell 2.5 YR 6/6 light red.

Description: This metal seems heavier than regular slag. The shape of the piece drawn suggests a spear or other projectile point immediately below.

drawing not to scale

Both pieces are corroded all over. They are bumpy all over, and of dark brown, gray, and orange shades.

Both pieces have had some of the corrosion removed with a scalpel. Both pieces retain their shape as drawn above, but with fewer large bumps. The piece drawn on top of this page looks very much like a projectile

Condition: fragmented but in good state of preservation

Description: From Pottery lot PZ-81-221 PL

50 amphora pottery pieces of munsell 5YR 7/6 reddish yellow. At place where neck meets belly of vessel, two lines circles the vase - approx. thickness of vessel wall is .5cm -

After Conservation - Table amphora is nearly complete; missing only about half of the rim, and one handle, and a few body sherds. The handle

has a raised center ridge running the length of it.

The neck is wide in relation to the belly. The rim is widely flaring and does not project far away from the neck.

One handle frag. is placed with the pot although it does not come from it.

rim to base

Maximum diameter 13.0 cm
(base to rim edge)

Condition: Somewhat encrusted, fragmentary

Description: from PZ-81-46PL.

Fragmentary gray ware plate w/ wide slightly offset rim, the edge of which is not preserved. The interior of the vessel slopes gently upward from the base to the edge of the rim (inner edge) which rises vertically. The top portion of the rim lies at approximately a 90° angle from the vertical inner edge. The expanse of the rim is 2.5 cm at the greatest point. Because of the fragmentary nature of the edge of the rim it is difficult to determine the exact nature of the rim, if there was any, on the exterior of the vessel. The vessel slopes gradually upward from the round foot to the edge. There is a small dip, (1.5 cm) just below the outer edge of the vessel. Approximately 1/4 of the foot is preserved. The foot is round and ~0.7 cm in height. The glaze on the interior is black (center) tending to grayish black. The large portion of the rim is black & dark gray. The latter appears to have been black at one time. The exterior is black around the top and streaked black and gray below. Some of the glaze appears to have flaked off. The bottom portion of the bowl is gray w/ black glazed dribbled. The foot is gray w/ some traces of black glaze remaining. The clay is fine w/ a few inclusions. Compact

H., 8.9cm.

W.,

Th., at base 0.6cm.

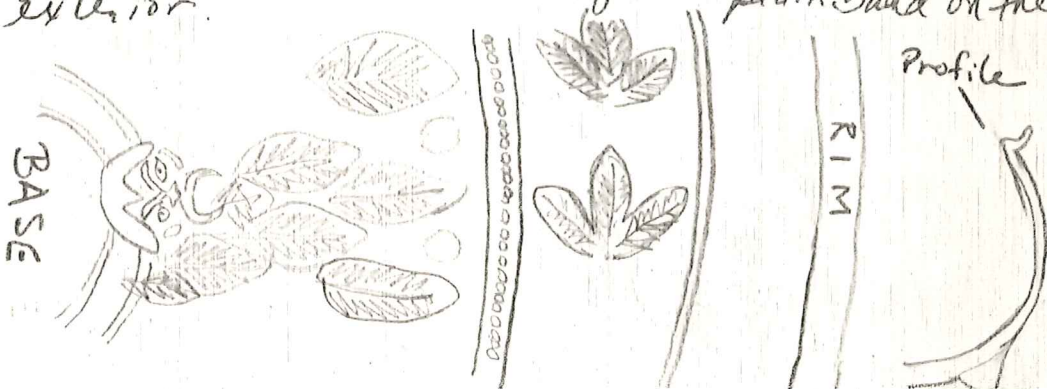

Technique: Diam. of base: 5.4cm. ext. diam at rim: 13.6cm. at rim 0.4cm.

Condition: Poor - very heavily encrusted, very little slip preserved

Description:

(from PZ-81-298PL)

One badly frag does not join. The other 2 form the complete profile. There is one satyr's head foot preserved, above which is a moulded leaf pattern. The moulded leaf pattern goes about half way up the bowl where there are circles of clay (moulded also) alternating with the leaf tips going around the bowl. Above this is a band with tiny circles in the middle. Next, a triple leaf pattern in a wide band encircles the vessel. This wide band is separated from the undecorated band above it by another narrow moulded band with no tiny circles in it. Above the plain band is the rim which flares out sharply and then up, forming an interior edge, much like rims made to receive lids. The interior was glazed at least as far down from the rim as the bottom of the plain band on the exterior.

Munsell: 5YR 7/6 (Reddish Yellow) -

2 raised bands form the decoration around the base of the neck.

The handle has 2 raised ridges on the outside. Inside has root marks, or some strange encrustation pattern all over. Some carbonized material remains on the interior of 2 pieces making up this section.

Condition: fragmentary but otherwise good.

Description: (from PE-81-339P)
(+ 2 pieces from PL 359.)

a large part of the jug has been restored from fragments. Some additions in plaster have been supplied. Part of the ring base survives separately (glued from 3 fragments) and there are four loose fragments which have not been attached.

This jug is of an extremely elegant shape, with a long, narrow neck, slightly flaring mouth with down-turned rim, gently sloping shoulders which are sharply offset from the bulbous, swelling body, and small foot (int. diameter c. 9.7 cms). The shoulder is decorated with incised bands, and there are traces of orange red glaze adhering to it + to the lower neck. Fabric is coarse but thin + the vessel is carefully worked.

0.5 cm

Condition: Weathered and scratched

Description: from P2-81-493 PL

The two sherds do not join and probably belong to different vessels.

A. Molded gray ware sherd w/ upper underconsted register, middle register w/ a band of alternating daisies and concentric circles, a divider of raised bands surrounding dots, and a final floral register, much of which has been obliterated. The piece is probably from a small bowl.

B. Very small gray ware body sherd w/ two registers w/ floral decoration.

Condition: Fragmentary, Encrusted	C. 2.5 cm	C. ~5.0 cm	C. 0.5 (top) to 0.6 (bottom)

Description: From PZ-81-506 PL

A. Molded rim and body sherds (join) of a small gray ware bowl which appears to be of the Megarian type. The decorated band consists of spikey plants alternating w/ conch shell flowers and wavy seaweed. Above the spikey plants there are, from left to right, an eros riding on a dolphin, an eel like fish w/ a prong tail and a pointed head, and an undistinguishable mass. A raised band indicative of the base is preserved. The rim is similar to PZ-81-571P. The glaze on both exterior and interior is a shiny dark gray.

B. Provenance - NW Trench, Batt. 15, Yellow Brown
24 June 1981
Encrusted body sherd w/ portions of a conch shell flower, a spikey plant, and three strands of seaweed.

C. Provenance - NW Trench, Ceramic Deposit, Level 3,
Batt. 2
25 June 1981
Encrusted body sherd w/ portions of a spikey plant, a conch shell flower w/ six stems, and another spikey plant.

Fragment of tile with stamped decoration in
 one corner. The stamp is not completely preserved.
 it might be the start of an inscription, with the
 letter Σ , or it might be just a decorative pattern.
 N.B. Parascene for this in "Metaphors" NSC 1960 or 1940!

TEXAS

Date: 25th June 81

No. PZ-81-623P

Object: Long ware ware amphora neck

Material: pottery

Square: NW trench,
ceramic deposits built
Level: 31 level 1

Photograph:

Drawing:

Dimensions: L.,

H.,

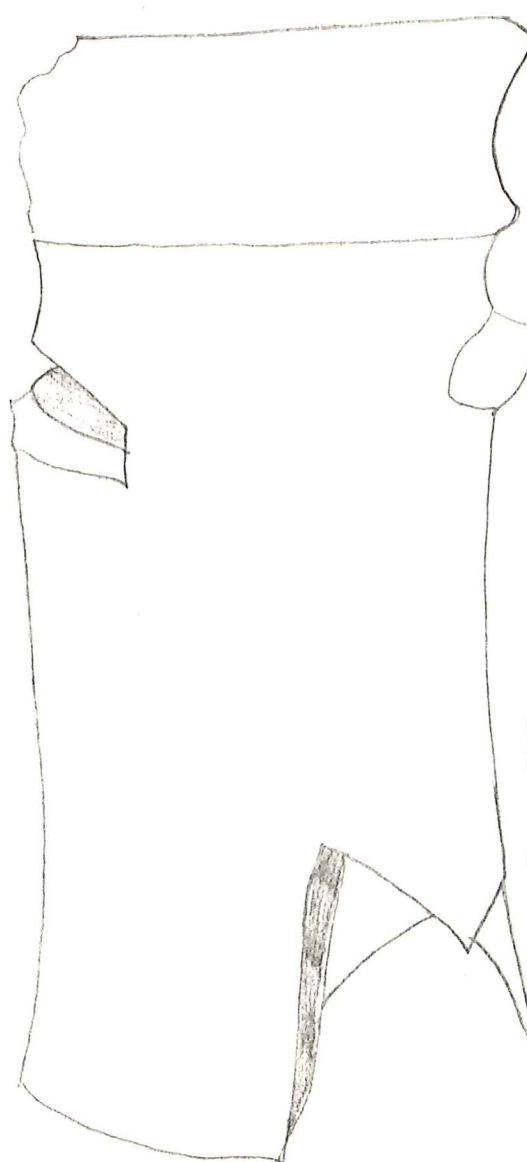

W.,

Th. at rim: 1.6cms
of neck - 1.5cms.

Technique: ware

Condition: fragments missing from rim and neck, otherwise good.

Description:

↑
height of rim: 3.9cms
inner diameter of rim: 13.4cms
↓
estimated outer diameter of rim -
c. 16.5cms

max. extant height: 31cms.

clay colour: - core -
Midsell 5YR 7/6 reddish yellow
outside: " 7.5YR 7/6 " "

This amphora had a huge, elongated and thick neck. The handles, judging from the huge handle attachment, must have been extremely large. The fabric is coarse and very thick - the rim is coarse & deep.

Object: Small black-glazed vessel

Material: Ceramics

Square: Well Trench
B. 2, M. 6, O. 9

Photograph:

Level:

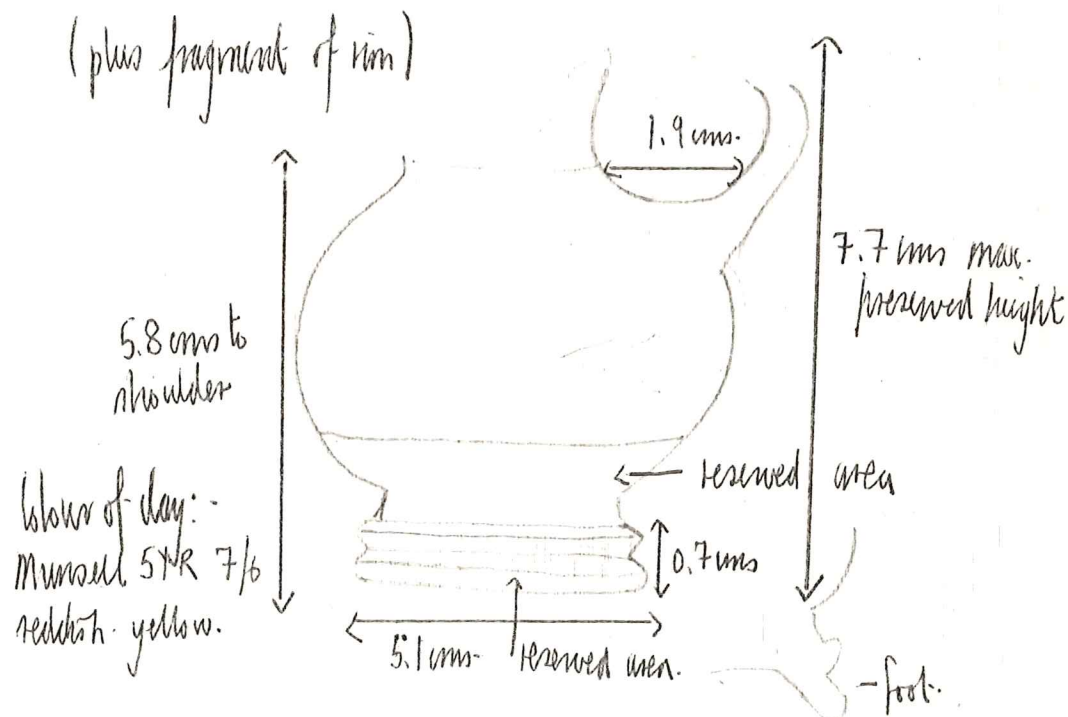

Drawing:

Dimensions: L., H., W., Th., 0.2 cms

Technique: black glaze with added decoration in white paint(?)

Condition: fragmentary, glaze dull, otherwise good.

Description:

Small black glazed vessel, some type of ovoid. The glaze extends unevenly down the neck inside. Part of the foot and the lower part of the body are reserved. The vessel has a plump, squat body and a wide neck. The handle has a deep central incision. The foot is high and elaborately moulded. Traces of pattern decoration can be observed; around the shoulder are rays, and around the widest part of the body an olive leaf-chelon. These were probably executed in white paint.

Diameter 8.2 cm

0.4 (rim) to 0.6 (body)

B 4.7 cm

Diameter ~9.0 cm

0.3 (rim) to 0.55 (body)

Condition: Fragmentary, approximately 2/3 of each vessel is preserved

Description:

(From PZ-81-621 PL)

Shallow gray ware bowls w/ hanging vertical sides and small ring feet.

A. The interior glaze is a light black. Some of the glaze on the interior has worn away leaving a light gray spiral following the circles of the potter's wheel. The vertical section of the vessel has traces of black glaze.

B. Both the exterior & interior are an olive/gray. Much of the glaze is flaking off. There is a trace of black glaze beneath the vertical side.

The feet and the under sides of the vertical walls of both vessels are different. The foot of B is taller than A.
