Hi Matt and Don,

I just received the appended e-mail. Would you please respond, as the request is outside of my area. I have replied to van Nieuwerkerken that I am forwarding his request to you.

Thanks,

Cliff

---

| Dear Clifford,

| I just noticed your recently published checklist of Alaska moths in Zootaxa, very useful and interesting!

| In the paper you mention a single nepticulid, *Ectoedemia* sp., from the holdings in Guelph.

| I assumed it to be barcoded, but cannot find it on the BOLD database, although I have access to many of the North American moths data.

| Do you know how I can get hold of this specimen?

| I have a few other Nepticulidae from Arctic parts of Canada on loan (including Holarctic and new species), and it might be nice to combine those in a paper.

| Thanks!

| Best wishes

| Erik

Dear Erik,

Below are URI's for two records (Arctos and BOLD) for one specimen held at the Biodiversity Institute of Ontario.

<http://arctos.database.museum/guid/KNWR:Ento:3511>

[http://bins.boldsystems.org/index.php/Public\\_RecordView?processid=ABKWR011-07](http://bins.boldsystems.org/index.php/Public_RecordView?processid=ABKWR011-07)

Sincerely,

Matt

Dear Matt, Clifford and Dan,

Thanks for the quick reply to my request.

Good to see there is indeed a DNA barcode, seeing the quality of the moth...

Anyway, I can give you a final name for the list: it is a female *Ectoedemia occultella lindquisti*.

This is a Holarctic species, but for the time being we keep the North American as subspecies *lindquisti*.

There is no identified specimen yet on BOLD, but I have several sequences myself of the North American form, and they are identical.

Best wishes,

Erik
