object class \_\_\_\_\_ object name in English SODDERING IRON  
object name in aboriginal language and translation of the term SOD ROK NUCK

general information about the object: 1. material or materials; where, when, and how obtained: 2. construction steps: 3. variations in construction: 4. made by whom, where, when, owned by whom: 5. uses, length of life: 6. other comments

The iron is heated on coleman stone, used without nail and wire first but too short - should have wooden handle over nail to keep from getting hot.

First time this one made but has made and used similar types in past.

Brass is good because it does not stick to sodder
