

TimestampClassExtension needs installing for excav\_gis.mdb to work properly on a new install of ArcGIS (extension that creates time- and user-stamps on a row-by-row basis for edits to any feature class)

-Unzip TimestampClassExtension.zip to your local drive somewhere without spaces in the path name (like c:\arcgis\TimestampClassExtension\...)

-Register the .dll:

1. go to Windows>Start>Run...
2. type the following in the Open: line of the dialog box (this must be all one line, with a single space after regsvr32.exe, followed by the path you unzipped the extension to):  
regsvr32.exe  
C:\arcgis\TimestampClassExtension\Visual\_Basic\TimeStamperVB.dll

-Navigate to the file called TimeStamperVB.reg and double click it.

That should work...
