

SITE CH06 SR	YEAR 2006	ROOM # or AREA NAME Room 38, Complex 2	CONTEXT NUMBER 0754
TYPE (positive, negative, wall) Positive	DEFINITION (cut in floor of X, fill of pit Y, north wall of room Z, etc.) Light gray ashy soil with stones in SE part of room 38		
DESCRIPTION (include consistency, color, composition, inclusions, dimensions; for cuts; also include shape and orientation) This layer consisted of very ashy, gray soil filled with many stones, rock, ceramics and metal fragments. The earth was fairly well compacted, and easily distinguish from the layer beneath. This layer also contained many seashells and was much less deep than 712 (the layer directly covering it).

INTERPRETATION. This layer appears to have been yet another fill layer in cut 728. The color was very grey and easily distinguished from both the layer covering and the layer it covered. This layer also had an unusually large number of rocks (large) and seashells throughout. There were 11 nails mapped, but very little charcoal remains.			
MATERIAL DATABLE IN FIELD? (if yes, specify) Yes - coin finds - Basil I; (poss) Constantine/Basil		PRELIMINARY DATE 9-10 <sup>th</sup> C.

STRATIGRAPHIC NOTES/DOUBTS (include any comments on methods, contamination, excavation conditions, or anything else that seems relevant) There was doubt, initially, concerning whether this layer covered or was covered by 753 - In our attempt to figure this out, we "traveled around" a bit and may have slightly contaminated the intersection between 754 and 753. It is still not clear, though, that this layer was closed properly - as it seems to continue into context 758.
