DESCRIPTION						
<p>Channel made of squared stones, descending to NE. It has a length of 4 m. and a depth of 13 cm. and it ends as a funnel on the S side, inside the room 25, where is bonded to US 157. It is earlier than the wall US 212 and so we can say that they built them in the same time. Inside the room there's no floor in that place. On the N side, where the doorstep US 291 is, US 322 abuts to the bedrock and seems to go under the doorstep, but it's cut by the modern trench US 271. It's possible that this channel flew into an earlier road.</p>
