release2/doc/

2016 ECCO
meeting

Solution History: the 1992-2011 solution documented here (ECCO v4-r2) is a minor update to the original ECCO v4 solution documented by Forget et al 2015 (ECCO v4-r1). As compared with ECCO v4-r1 (see Forget et al 2015 for details and notations) ECCO v4-r2 benefits from a few additional corrections in the model settings:

1. Inclusion of geothermal heating at the sea floor in MITgcm and ECCO v4 settings.
2. Inclusion of \mathcal{K}_{gm} and \mathcal{K}_{σ} interpolation to C-grid velocity points in MITgcm and ECCO v4 settings.
3. Re-inclusion of targeted bottom viscosity in ECCO v4 settings.
4. Re-inclusion of estimated wind stress adjustments over 2000-2011 in ECCO v4 settings.
5. Re-adjustment of ECCO v4 global mean precipitation (homogeneously) to match the AVISO global mean sea level time series (<http://www.aviso.altimetry.fr/>).

Contents Included Below: the gcmfaces 'standard analysis' (introduced in Forget et al. 2015) appended below for ECCO v4-r2 depicts routinely monitored characteristics of ECCO solutions. It allows for direct comparison with the published ECCO v4-r1 standard analysis (doi:10.5194/gmd-8-3071-2015-supplement).

- **Location ECCO v4-r2:** ftp://mit.ecco-group.org/ecco_for_las/version_4/release2/
- **Contents of release2/doc/:** README, standardAnalysis.pdf (<http://hdl.handle.net/1721.1/102062>), diffusivities, nctiles90x90.jpg, ...

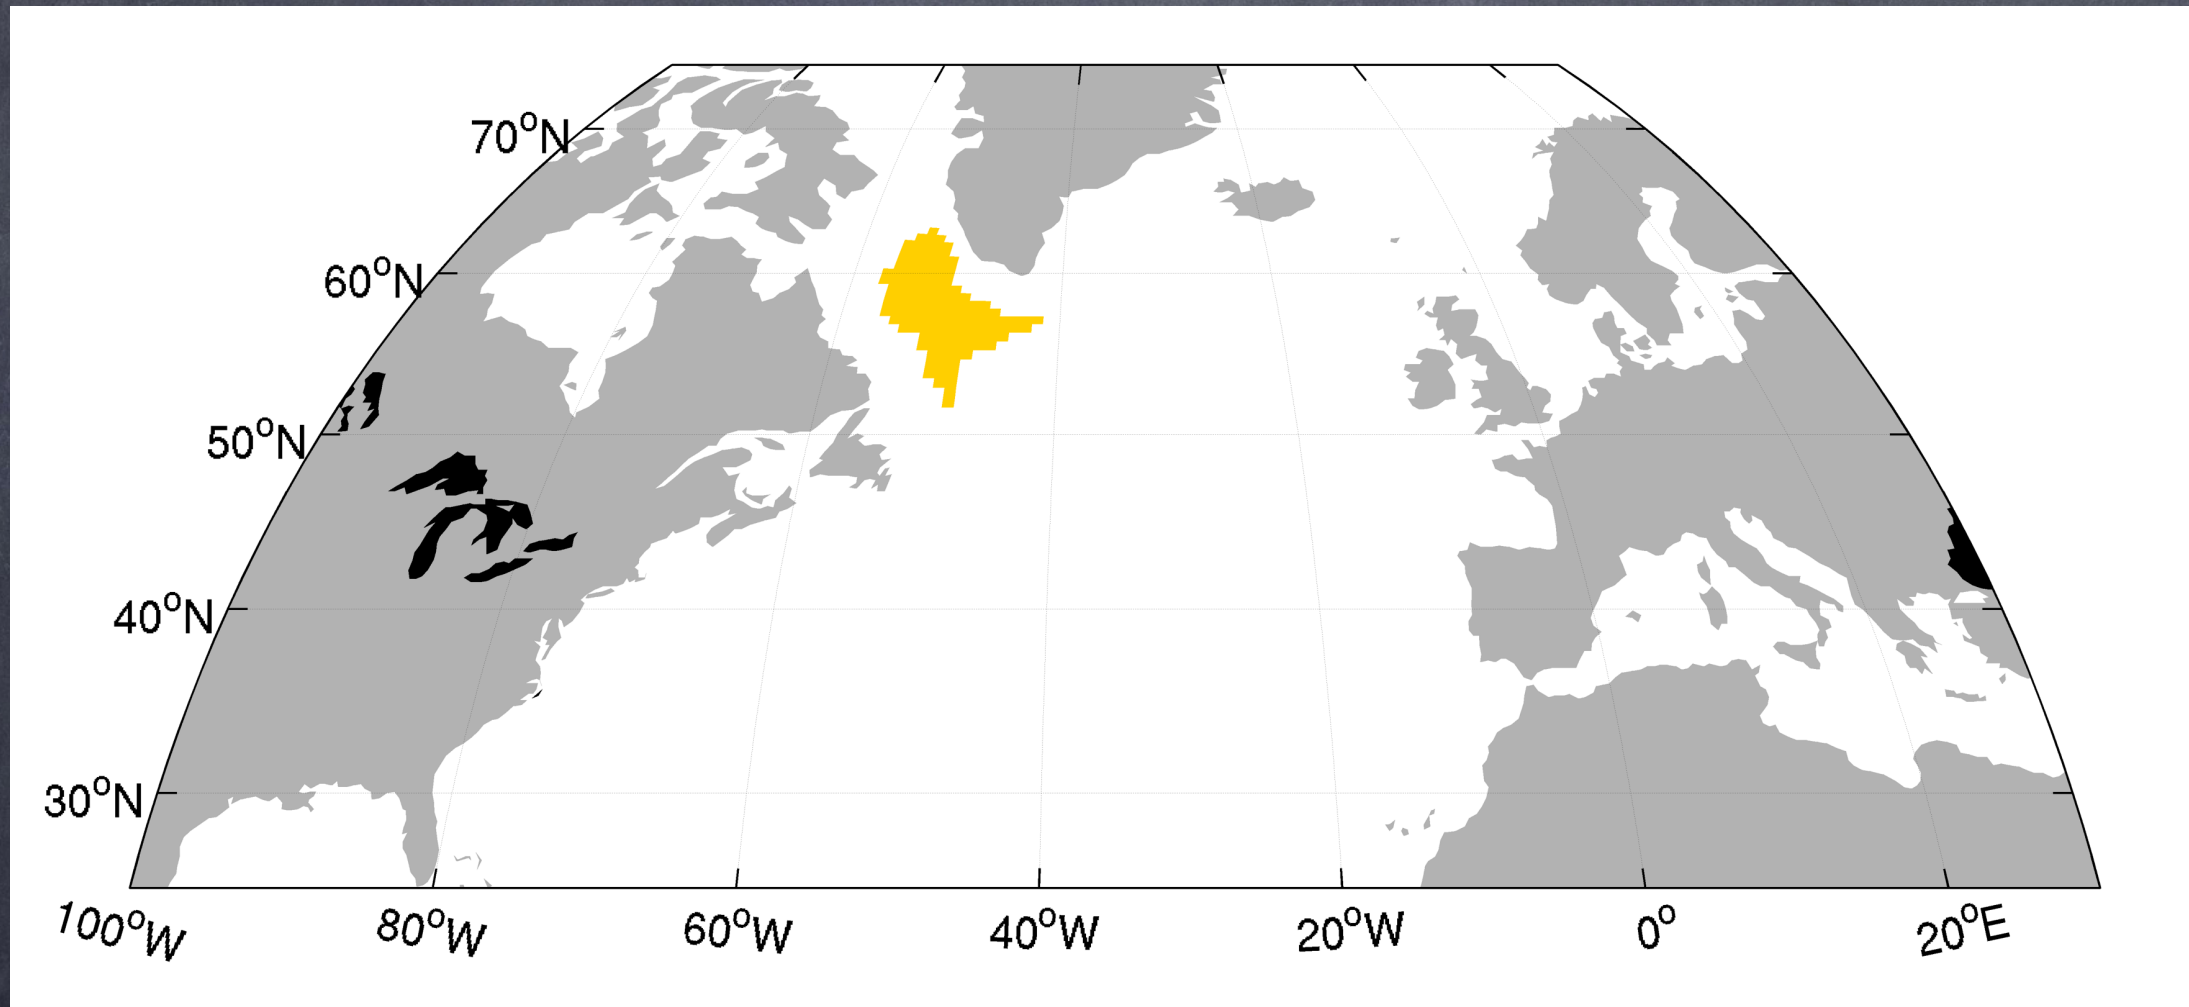

- Individual netcdf files can be read directly in any netcdf enabled software (e.g. NASA's panoply).
- In Matlab 'nctiles' files groups can also be read collectively using the 'gcmfaces' toolbox.
- alternative to nctiles: interpolated fields (0.5x0.5 grid) are provided in release2/interp_*/

w. 95% misfit interval (shading)
& altim. large scale SLA (black)

SLA in ECCO differs from
'ETAN' by ice load and global
thermosteric correction

```
#1) compile the model
cd MITgcm/verification/global_oce_llc90/build
../../../../tools/genmake2 -mods=../code -optfile \
    ../../../../tools/build_options/linux_amd64_gfortran -mpi
make depend
make -j 4

#2) link files into run directory
cd ../run
ln -s ../build/mitgcmuv .
ln -s ../input.ecco_v4/* .
ln -s ../input_fields/* .
ln -s ../../inputs_baseline2/input*/* .
ln -s ../../forcing_baseline2 .

#3) run model
mpiexec -np 96 ./mitgcmuv
```

- **Purpose:** additional output, investigative experiments, ...
- **Daily Tests:** <http://mitgcm.org/public/testing.html>
- **Location:** http://mitgcm.org/viewvc/MITgcm/MITgcm_contrib/gael/verification/ (contains **eccov4.pdf** user guide that provides download directions etc.)
- **Documentation:** Forget, et al., 2015 (GMD).

Forward
Experiments

2016 ECCO
meeting

Forget and Ponte, 2015 (PO)

Other examples: Forget et al 2015 (GMD), Forget et al 2015 (OS) and wednesday presentation

Tropical Pacific Sea Level Differential (blue curve) and its reconstruction using the adjoint (blue curve)

The reconstruction is achieved by convolving adjoint sensitivities with wind stress anomalies (Equations below). For published examples: see Fukumori et al 2015 and reference therein.

$$J(T, \tau) = \int_{wtp} H(x, y, T, \tau) dx dy - \int_{etp} H(x, y, T, \tau) dx dy$$

$$\mathcal{G}(x, y, t - T) = \frac{\partial J}{\partial \tau}(t - T) \text{ from the adjoint model}$$

$$K(T, \tau) = \int_{-\infty}^T \int_{glo} \mathcal{G}(x, y, t - T) \cdot \tau'(x, y, t) dx dy dt$$

- **ECCO v4, OVERVIEW:** Forget, G., J.-M. Campin, P. Heimbach, C. N. Hill, R. M. Ponte, and C. Wunsch, 2015 (GMD, <http://dx.doi.org/10.5194/gmd-8-3071-2015>)
